RESTORER
CLEANER

THE GOOD STUFF® is a scientifically blended formula, hard surface cleaner that removes mildew, mold, algae, oil scum, oxidation, rust, brine, soap build-up, hard water deposits, stains, minerals, grease, body oils, caked on deposits and other discolorations on all types of glazed and unglazed ceramic tile and grouting. Unique brightening agents and color enhancers help bring back the luster. The specially formulated silanes not only help restore the shine to the finish, they also form an invisible protective barrier which can help stop recontamination of the restored area as well as making future cleaning simple.

SUGGESTED USES

THE GOOD STUFF® is also great for: oxidized aluminum doors and windows; chrome; stainless steel; Fibreglas®: showers, tubs, boats; China: commodes, sinks and urinals; Plastic: stalls, tubs and fixtures. Tarnished brass, copper and bronze. Carbon and rust deposits. Dissolves heavy deposits of grease on parts and equipment.

DILUTION CHART

Extreme Dirt: Mix **THE GOOD STUFF®** with four parts of water.

Heavy Dirt: Mix **THE GOOD STUFF®** with six parts of water.

Medium Dirt: Mix **THE GOOD STUFF®** with twelve parts of water.

Regular Cleaning: Add one to three ounces to a gallon of water.

Dirty Floors: 1 quart of **THE GOOD STUFF®** to five gallons of water.

Greasy Floors: One quart of **THE GOOD STUFF®** with two to three gallons of water.

DIRECTIONS: Thoroughly soak the entire area to be restored with cool tap water until the grout holds water on the surface. Brush or broom a generous amount of product over the entire area. Scrub with a stiff scrub brush, deck brush or power scrubber. Allow **THE GOOD STUFF®** to work 15 minutes. If necessary re-apply **THE GOOD STUFF®** to the wall tile with material that has reached the tub or floor. Agitate periodically. Allow **THE GOOD STUFF®** to work from five to thirty minutes, or longer, for extra stubborn stains. **Rinse thoroughly** and completely with **hot water**. Scrub over the entire area while rinsing to be sure all residue is free from the grout lines. On floor areas, **rinse thoroughly** with a hose, pressure washer or vacuum scrubber. If a floor drain is available, squeegee the residue to the drain while rinsing with **hot water**. A Wet-Vac or Rinse-n-Vac will help remove the dirt left in the grout. If a wax, urethane, or other sealer has been used, a stripper may be required to remove it.

Do not apply to non acid/alkali resistant finishes, terrazzo or marble.

Always test patch a small area for color fastness and desired results before general use of this product.

CAUTION: Wear rubber gloves and protective clothing. In case of eye or skin contact, flush thoroughly with water for 15 minutes. If swallowed, **DO NOT** induce vomiting. Give several glasses of water or milk. Call a physician.
